

ROOFLINE MAINTENANCE GUIDE

Roofline products require very little maintenance but when necessary, can be cleaned following the guidelines below

General cleaning

- For general cleaning, use a soft cloth and warm water with soap or washing-up liquid.
- To remove grease marks, use washing-up liquid with little or no water, then rinse with clean water.
- Keep gutters clear. Regularly remove any build-up of leaves or debris and during periods of heavy snowfall, remove snow from the gutters to avoid the weight of the snow bringing the gutter down.

Tough Stains

- For long-neglected uPVC use a uPVC cream cleaner.

Never Use

The following solutions are likely to cause corrosion or damage to your roofline products.

- Any other cleaning agent.
- Caustic or ammonia-based cleaning agents.
- Scouring powder or other abrasive cleaners.
- Steel wool or scouring pads.

If rainwater is leaking from above the guttering or from connections in the guttering or downpipes please check that there are no leaves or debris that have built up in the gutter system before contacting us
